Dear Hiring Manager,

With my skill set and experience, I believe I would make a great addition to the Blue Apron team. I have experience with multiple web technologies, including Ruby on Rails, Javascript, HTML5, CSS3, React.js, PostgreSQL, responsive frameworks like Bootstrap and Skeleton, and behavior driven development frameworks like Jasmine and RSpec. I have built a number of passion projects using these technologies, including CitiBike Map, a live station feed map of New York City CitiBike locations. The app was built using Ruby on Rails, a vanilla Javascript MVC frontend, and the Google Maps API.

Whether it's a team project or my personal website (www.tomyancey.me), I always insist on a high level of quality and stability.

For all of the reasons above, I believe I would make a great addition to your team. I have attached my resume for your consideration and look forward to hearing from you.

Best Regards,

Thomas Yancey
